SUMMARY

Backend Developer with hands-on experience designing and deploying scalable RESTful APIs using Node.js, Express.js, and MongoDB. Proficient in JWT authentication, OAuth 2.0, role-based access control, and secure API design. Experienced with Docker, CI/CD pipelines, Agile development workflows, and modular MVC architecture. Strong foundation in data structures, algorithms, system design, and unit testing with Jest.

EDUCATION

Ajay Kumar Garg Engineering College <i>B.Tech – Computer Science & Engineering CGPA: 7.0</i>	Ghaziabad, India <i>Sep 2023 – May 2027</i>
--	--

TECHNICAL SKILLS

Languages: JavaScript, C++, Python, SQL
Backend: Node.js, Express.js, RESTful API Design, Microservices, JWT Authentication, OAuth 2.0, Middleware Architecture, Input Validation, Rate Limiting, SMTP/Email Automation
Testing & Quality: Jest, Unit Testing, Integration Testing, API Testing, Postman, Swagger/OpenAPI
Databases: MongoDB, Mongoose ODM, MySQL, Redis, NoSQL, Schema Design
Security: JWT, OAuth 2.0, bcrypt, Role-Based Access Control (RBAC), HTTPS/SSL, Secure Coding
DevOps & Tools: Git, GitHub, Docker, Linux, npm, CI/CD (GitHub Actions), VS Code, Postman
CS Fundamentals: Data Structures & Algorithms, OOP, System Design, MVC Architecture, Agile/Scrum, SDLC

PROJECTS

Verixa – Certificate Generation & Verification API <i>Node.js, Express.js, TypeScript, MongoDB, JWT, Swagger</i> - Architected a backend SaaS RESTful API for generating and verifying digital certificates using unique verification codes (CER-YYYY-XXXXXX), managing 500+ certificate records across multiple organizations. - Designed 10+ RESTful endpoints for certificate CRUD operations, export, and revocation; enforced JWT authentication with email OTP and Role-Based Access Control (RBAC) to eliminate unauthorized access. - Implemented bulk certificate generation and CSV export pipeline, reducing manual issuance time by ~70% for batch operations of 100+ certificates. - Integrated MongoDB with Mongoose ODM and Multer for secure file uploads; exposed Swagger/OpenAPI-documented public verification endpoints for third-party clients without authentication overhead.
Smart Email Automation & Client Outreach System <i>Node.js, Express.js, MongoDB, Nodemailer, Jest</i> - Built a modular RESTful API for dynamic HTML email templating and SMTP delivery via Nodemailer, processing 1,000+ personalized emails per batch with async queuing and error handling. - Designed a template parsing engine with automatic variable extraction, reducing template setup time by ~60%; validated all input data with server-side sanitization following secure coding practices. - Engineered an email logging and delivery-status tracking system covering 5,000+ outreach records; wrote unit tests with Jest achieving 85%+ coverage across core service modules.
Task Management System <i>Node.js, Express.js, MongoDB, JWT, bcrypt, OAuth 2.0, REST API</i> - Built a secure backend system with RESTful APIs supporting full CRUD operations; implemented JWT authentication, OAuth 2.0 flow, and bcrypt password hashing for end-to-end secure user sessions. - Designed Role-Based Access Control (RBAC) enabling admin-level task assignment while restricting user-scope access across all protected routes; enforced input validation middleware on all endpoints. - Structured codebase with modular MVC architecture (controllers, routes, middleware) following SDLC and Agile development practices for maintainability and horizontal scalability. - Containerized application with Docker and configured GitHub Actions CI/CD pipeline; documented all endpoints with Postman collections ensuring full integration test coverage.

ACHIEVEMENTS & CERTIFICATIONS

- Agentic AI & MLOps – 5-Day Workshop Certificate

CORE COMPETENCIES

System Design · API Architecture · Secure Coding · Unit Testing · Team Collaboration · Agile Development · Problem-Solving · Code Review · Debugging
